¹ Includes test categories B and B1

² Gender details about licence holders from other countries (such as Northern Ireland) are reliant upon information being captured accurately at the time of booking a test. In some cases, gender will not have been captured. Where gender has not been captured these candidates will only be recorded in total tests conducted. There will therefore be small anomalies where the gender totals do not match overall totals.

Please note that all statistics are provisional until information for the whole financial year is published. Until that point, data for months / quarters from within the current financial year can be revised.
